

**Amendments to the Specification:**

Please replace the paragraph beginning at page 2, line 13, with the following amended paragraph:

Besides the layers mentioned above, the elastomeric article may also ~~contains~~ contain other layers. In one embodiment, for instance, the elastomeric article can contain a donning layer overlying the inside surface of the substrate body. If desired, a lubricant layer may also ~~overlay~~ overlie the inside surface of the donning layer.

Please replace the paragraph beginning at page 14, line 13, with the following amended paragraph:

A lubricant layer 32 can also ~~overly~~ overlie the donning layer 30 to aid in donning the article when the user's body is either wet or dry. The lubricant layer 32, for example, can include a cationic (e.g., cetyl pyridinium chloride), an anionic (e.g., sodium lauryl sulfate), or a nonionic surfactant. For instance, in one embodiment, the lubricant layer 32 contains a quaternary ammonium compound, such as Verisoft BTMS (available from Goldschmidt Chemical Corp. of Dublin, Ohio) and a silicone emulsion (AF-60) obtained from General Electric Silicone. Verisoft BTMS contains behnlyl trimethyl sulfate and cetyl alcohol, while AF-60 contains polydimethylsiloxane, acetylaldehyde, and small percentages of emulsifiers. In another embodiment, the lubricant layer 32 contains a medical-grade silicone such as Dow Corning 365 silicone, which is believed to contain water, polydimethylsiloxane, octylphenoxy polyethoxy ethanol, propylene glycol, and polyethylene glycol sorbitan monolaurate.
